---

NESCONSET, NEW YORK -- CybraryN™ Solutions, the recognized leader in public access control and security software, and Fast Data Technology, a leading provider of Internet solutions and services, today announced a new strategic partnership. Under the strategic partnership, Computers By Design, Inc. will exclusively offer FastTracker as their Internet content filtering solution to library customers.

FastTracker employs patent-pending artificial intelligence to offer unparalleled accuracy for its customers. The artificial intelligence technology prevents over-blocking, which allows for maximum freedom while complying with CIPA or other regulations. It also prevents under-blocking, which raises liability and personal complaint issues.

FastTracker doesn't just look at URLs, and it doesn't just make lists of "unacceptable sites". It actually categorizes text-based content. FastTracker's patent-pending technology analyzes Web content in human terms and sorts Web sites, Web pages, and Web-based e-mail into 30+ distinct categories. Each library can customize their categories and sub-categories to suit their needs. Moreover, it allows for site-specific, customized exceptions to categories, and allows for additions or deletions to site lists, allowing libraries to further customize their filter.

### **About Fast Data Technology**

---

In business since 2000, Fast Data Technology is new to the library market, and is excited to offer the most highly advanced filtering technology available at educational costs. Headquartered in Boulder, Colorado, Fast Data Technology will offer libraries the functionality previously only offered to high-end, corporate clients.

### **About CybraryN Solutions**

---

Headquartered in New York, CybraryN Solutions, a wholly owned subsidiary of Computers By Design Inc., specializes in developing access control and reporting software for library environments. Enjoying rapid adoption worldwide, the company's flagship product, CybraryN, allows organizations to easily manage public access computer usage, print costs, and resource scheduling while providing essential desktop security. For more information on products visit <http://www.CybraryN.com> or call 1-800 THE-TOWN, fax 1-888 THE-TOWN.
